

Assignment

Topic: HDFS Commands

To see the help page of hdfs commands, you may type `hdfs dfs -help`

To see help of any command on hdfs you may type `hdfs dfs -help comamnd_name`

1. Create a directory on HDFS in your home directory (Hadoop Distributed File System).
2. Create two more directories in a single command in your home directory.
3. List the directories created in HDFS and check in what sort order are the contents listed by default?
4. Create a sample file (eg: sample.txt) in any of the directories created above.
5. Copy a file from local file system to one of the directories created on HDFS. (This process of copying file from local file system to HDFS called as Uploading files to HDFS).
6. View the uploaded file.
7. Copy one more file from local file system to HDFS to another directory created.
8. Copy a file from HDFS to local file system (This is called as Downloading a file from HDFS to local file system)
9. Look at the contents in the file that is uploaded on HDFS.
10. Copy the file from one directory to another directory in HDFS.
11. Move the file from one directory to another directory in HDFS.
12. Copy a file from/To Local file system to HDFS. Use `copyFromLocal` and `copyToLocal` commands
13. Display last few lines from the file in HDFS.
14. Display the size of the file in KB and MB in the HDFS.
15. Append a file from Local File to system to file on HDFS
16. Set the replication to the file created to 4
17. Remove a file from the directory in HDFS.
18. Remove a directory in HDFS.
